

Geological Survey professional paper Volume 355

By -

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 80 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1987 Excerpt: . . . size as much as 175 mm in diameter. The subglobose spinose forms accentuate the ornament, but attain only a relatively small size; maximum as much as 90 mm in diameter. There appears to be an inverse relation between maximum size on the one hand and degree of stoutness and strength of ornamentation on the other. The suture line is relatively simple, with the first lateral lobe a little larger than the ventral lobe and asymmetrical and four to six much smaller and rather narrow additional lobes between it and the line of involution. The dorsal suture contains four slender lobes on each side of the dorsal lobe. The most distinctive characters are the nodose or spinose ornament, particularly on the midline of the venter, and the forward arching of the ribs on the venter. In this paper five species of Neogastropiles are recognized, each containing infrasubspecific...

Reviews

A whole new eBook with a brand new point of view. It is really simplistic but surprises in the fifty percent of the publication. I am just effortlessly can get a delight of looking at a written ebook.

-- **Mariano Gleichner**

Thorough guide for pdf enthusiasts. Better then never, though i am quite late in start reading this one. Its been printed in an remarkably simple way which is only soon after i finished reading through this pdf by which really altered me, change the way i believe.
