## AhR-Binding pollutants in aquatic environment

By Nandana P. Gunawickrama

VDM Verlag Feb 2011, 2011. Taschenbuch. Book Condition: Neu. 220x150x3 mm. This item is printed on demand - Print on Demand Neuware - This work reviews finfish responses to dioxins, furans, polychlorinated biphenyls and polycyclic aromatic hydrocarbons in marine and other aquatic environments and their use in pollution monitoring and risk assessment approaches. Based on cited research, it identifies cytochrome P4501A (CYP1A) gene induction, toxicant bioconcentration, oxidative damage, pathological lesions, genotoxicity, endocrine disruption, immunotoxicity, developmental toxicity and reduced growth & survival as major impact areas. In this context, fish biomarker responses and the importance of using chemical data from environmental matrices or tissues with relevant analytical approaches have been discussed. Further, toxic equivalency (TEQ) as a measure of compartmentalized toxic potency, the need for interpretation of biomarker responses in concert and in relation to contaminant levels for risk identification and predictability, and the importance of integrated aquatic ecological and human health risk assessments have been emphasized. 52 pp. Englisch.

### Reviews

*An exceptional pdf as well as the typeface utilized was interesting to see. I am quite late in start reading this one, but better then never. I am very happy to explain how this is actually the best pdf i actually have go through within my individual daily life and might be he greatest publication for possibly.*

-- **Freddie Zulauf**

*The ideal publication i ever read through. It is writter in simple words and never hard to understand. Your daily life span is going to be convert once you full looking over this ebook.*

-- **Tanner Willms PhD**
